Task:
• **Build an application that allows you to add movies to an array with optional additional information.**

• **Use command line input to navigate the application.**

• **Define functions in a separate file and import into app.js**

• **The application must ask for additional information about the entered movie.**

• **At the end of runtime it must console log the movie added with any optional info.**

Stretch Goal – Add multiple movies during runtime and add them to the console.log at the end
